DETAILED ACTION

Response to Amendment

1. The amendment filed on 6/26/02 is entered, The USC 112/ second paragraph rejection is now withdrawn.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-17, ~~18~~ 19-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida (Japanese Patent Laid Open Publication 56-119280 in view of Mori (US Patent 5,644,339) .

As to claim 1, Yoshida discloses an image processing device comprising:

image processing means for executing image processing to move an object to different positions on a display means (English abstract , lines 1-8). However, Yoshida fails to teach position computing means. Mori et al teaches position computing means for computing said contact position (coordinate detector 12, figure 1, display means for displaying an image at an object display position (LCD 17 , figure 1), contact input means movable and brought into contact with said display means (stylus pen shown in figure 1 brought in contact with digitizer which is

superposed with LCD 17, column 4, lines 10-13), determination means for determining whether a desired positional relationship is established between said contact position and said object display position based on computed results (computing device 14, column 3 line 67 through column 4, line 9, recognition device 13, column 3, line 65), wherein said image processing means provides prescribed image processing for said object when the determining means determine that the desired positional relationship has been established (character recognition of locus by device 13, processed by device 14 resulting in display of symbols on device 17). **It would have been obvious to a person of ordinary skill in the art at the time of the invention to utilize the apparatus taught by Yoshida and implement the teaching of Mori et al, as to contact input means and other aforementioned means, to obtain the apparatus Yoshida modified by Mori et al., because it would result in fast response and accurate results in a game environment.**

As to claims 2-17, 19-40, see the same citation for claim 1.
